

ASHUTOSH SALUNKE

Senior ServiceNow Developer

Pune, India | +91-8087402991 | ashutoshsalunke@proton.me | linkedin.com/in/ashutoshasalunke

Professional Summary

ServiceNow Developer with 7.5+ years of overall IT experience, including 3.6+ years of ServiceNow-focused development across ITSM, HRSD, and CMDB. Experienced in leading end-to-end ServiceNow implementations and platform migrations — including a BMC-to-ServiceNow cutover — building REST and IntegrationHub integrations with systems such as JIRA, Citrix, and HR platforms, and automating approval, fulfillment, and incident workflows through Flow Designer and JavaScript-based scripting to cut manual effort and speed up service delivery.

Technical Skills

- **Modules:** Incident, Problem, Change, Service Catalog, Service Portal, CMDB, HRSD, Discovery Fundamentals
- **Development:** JavaScript, Business Rules, Client Scripts, Script Includes, UI Policies, UI Actions, Flow Designer, Scheduled Jobs, Fix Scripts, Background Scripts
- **Glide APIs:** GlideRecord, GlideAjax, GlideSystem, GlideDateTime
- **Integration:** REST API, IntegrationHub, OAuth 2.0, MID Server
- **Platform:** Catalog Items, Record Producers, Notifications, Email Scripts, Assignment Rules, Approval Policies, SLA Configuration, Update Sets, Reports & Dashboards
- **Project Tools:** Agile/Scrum, JIRA, Confluence, MS Teams
- **Soft Skills:** Requirements Gathering, GAP Analysis, Stakeholder Management, UAT, Documentation

Professional Experience

Senior Software Engineer – ServiceNow Developer

July 2025 – Present

Tech Mahindra, Pune, India

BMC to ServiceNow Migration

ServiceNow ITSM & Integration · Gaming & Sports Technology

- Migrated foundation data for users, groups, locations, and departments from BMC to ServiceNow using LDAP, Import Sets, and Transform Maps, completing cutover with zero critical post-go-live defects.
- Rebuilt Incident, Problem, Change, Request, and Service Catalog processes natively in ServiceNow ITSM, covering 15+ baseline categories, subcategories, resolution codes, and assignment rules.
- Established the Service Portal from the ground up: branding, portal pages, catalog taxonomy, and navigation.
- Configured Assignment Rules, Approval Policies, and SLAs to support the new environment.
- Coordinated Update Set migrations across Development, Test, and Production, along with cutover activities and UAT across all three environments.
- Engineered a REST API integration with Citrix — using Scripted REST APIs, token-based authentication, and payload mapping of user ID, requested application, and access level — to automate provisioning and deprovisioning of virtual application and desktop access, significantly reducing access provisioning turnaround time through automated workflows.

ServiceNow ITSM Implementation

ServiceNow ITSM & Integration · Government/Public Sector

- Delivered full ITSM implementations for a government organization in Saudi Arabia, covering Incident, Request, and Change Management, including bilingual (Arabic/English) notifications and SLA priorities tailored to the organization's requirements.
- Rolled out Service Catalog items across IT, HR, and Facilities — including automated approval workflows and task assignments for common requests such as device replacement — reducing reliance on email-based requests through automated catalog workflows.
- Designed Change Management processes around CAB approvals, Standard/Normal/Emergency change types, and the Change Calendar to fit organizational change-control needs.
- Automated issue resolution and structured change approvals with workflows, Business Rules, and notifications, giving teams clearer visibility into open work and faster response on priority items.
- Assembled executive dashboards providing visibility into ticket trends, SLA compliance, and team KPIs, and ran requirement workshops with stakeholders through UAT and go-live.
- Root-caused a broken request approval process after a platform upgrade to a missing out-of-the-box sc request flow, then implemented a permanent fix, resolving recurring approval failures through a redesigned Flow Designer workflow.
- Stood up a ServiceNow-JIRA integration using Outbound REST APIs and Scripted REST APIs to automate record creation and updates, data mapping, and error handling for incident-to-issue synchronization.

Software Engineer – ServiceNow Developer

March 2023 – July 2025

Tech Mahindra, Pune, India

Greenfield ITSM Implementation

ServiceNow ITSM & Integration · Fintech

- Led a Greenfield ServiceNow ITSM implementation for a 3,000-employee global fintech firm with offices across India, UAE, and UK — from requirement gathering through go-live.

- Set up foundation data including Users, Groups, Roles, Departments, and Locations with custom role-based access controls for IT, HR, and Finance teams.
- Shipped Service Catalog items including a “New Laptop Request” item with dynamic variable sets, conditional mandatory fields via UI Policies, and automated catalog task creation. Layered in approval workflows via Flow Designer with manager-level approvals, fallback logic for absent managers, 48-hour timeout escalations, and automated multi-stage notifications.
- Configured P1–P4 SLA definitions with a dedicated 24x7 schedule for critical incidents and a business-hours schedule for standard priorities, with a warning at 75% and breach notifications at 100%.
- Produced dynamic IT Manager dashboards with real-time KPIs for open incidents, SLA breach rates, and MTTR using Performance Analytics widgets.
- Developed a REST integration with an external HR system using OAuth 2.0 authentication via Connection & Credential Aliases and IntegrationHub to sync employee records.
- Extended CMDB with a custom “Trading Server” CI class and configured Identification & Reconciliation Engine (IRE) rules for accurate CI reconciliation.
- Orchestrated an automated employee onboarding flow triggered on new HR record creation — sequentially provisioning IT equipment, system access, and Finance tool setup.

ServiceNow ITSM, CMDB & HRSD Implementation

ServiceNow ITSM, HRSD & CMDB · Islamic Banking & Financial Services

- Implemented ServiceNow ITSM and HR Service Delivery (HRSD) for one of the world’s largest Islamic banks with 12,000+ employees across Saudi Arabia, Kuwait, Jordan, and Malaysia.
- Hardened Incident, Problem, and Change Management modules with banking-grade SLA definitions, strict access controls, and financial compliance audit trails.
- Established the HRSD module covering Employee Center, HR Case Management, and Lifecycle Events — including onboarding, offboarding, and employee transfer workflows.
- Codified Flow Designer workflows for HR processes: new hire provisioning, exit clearance flows, and manager self-service approval chains.
- Integrated ServiceNow with the bank’s internal Active Directory via LDAP for automated user provisioning and deprovisioning.
- Configured Major Incident Management (MIM) with P1 bridge-call triggers, stakeholder communication plans, and post-incident review workflows — critical for banking uptime requirements.
- Mapped CMDB relationships across server, network device, and application CIs, capturing dependencies for core banking infrastructure.
- Partnered with the bank’s IT Security team to configure ACLs enforcing strict data segregation between HR, IT, and Operations teams.
- Conducted UAT sessions and training workshops for 50+ end users, and supported the hypercare period post-go-live.

ITSM & Service Catalog Implementation

ServiceNow ITSM & Service Catalog · Banking

- Shaped the Service Catalog taxonomy and branded the Service Portal for a consistent, easy-to-navigate self-service experience, supporting 500+ monthly service requests.
- Centralized the Service Catalog with automated approvals via Flow Designer, streamlining request submission and fulfillment for end users.
- Wrote a custom Business Rule to automatically reset SLA timers whenever a request’s vendor or assignment group changed, along with additional vendor-driven SLA logic tailored to the client’s specific requirements.
- Streamlined Incident, Problem, and Change Management processes with workflows, Business Rules, and notifications, reducing manual effort for support teams.
- Introduced custom UI Actions that cut manual steps and improved response time for IT workflows during production downtime.

Software Test Engineer

January 2019 – March 2023

Tech Mahindra, Pune, India

- Designed and executed automated UI test suites using Selenium WebDriver and Java to validate core trading platform workflows across releases.
- Architected a Page Object Model framework to keep test scripts reusable and easy to maintain as the platform evolved.
- Automated regression testing for critical flows — login, order placement, and account management — meaningfully cutting manual test turnaround time.
- Integrated automated test suites into the CI/CD pipeline to enable continuous testing on every build and catch defects earlier.
- Tracked defects through to resolution, working closely with developers to validate fixes before each release.

Certifications

- **ServiceNow Micro-Certifications:** Flow Designer, Integration Hub, UI Builder, Platform Analytics, Now Assist for Creator, AI Agents
- **ServiceNow Delivery Accreditations:** Agentic AI Implementation, Now Assist Implementation

Education

Bachelor of Science, Computer Science

Dr. D.Y. Patil ACS College, Pimpri — Savitribai Phule Pune University, Pune, India
