

ASHUTOSH SALUNKE

Senior ServiceNow Developer

Pune, India | +91-8087402991 | ashutoshsalunke@proton.me | linkedin.com/in/ashutoshsalunke

PROFESSIONAL SUMMARY

ServiceNow Developer with 7.5+ years of overall IT experience, including 3.5+ years of ServiceNow-focused development, specializing in designing and building ITSM solutions across Incident, Change, and Request Fulfillment. Skilled in JavaScript-based platform customization, Flow Designer automation, REST integrations, and CMDB configuration, with a proven ability to collaborate with cross-functional teams to deliver scalable, user-focused solutions that follow ServiceNow best practices.

TECHNICAL SKILLS

ITSM Modules: Incident, Problem, Change, Request Fulfillment, Service Catalog, Employee Center

Development: JavaScript, Business Rules, Client Scripts, Script Includes, UI Policies, UI Actions, Flow Designer, Scheduled Jobs, Fix Scripts, Background Scripts

Integrations & Data Management: REST APIs (Inbound & Outbound), LDAP, Integration Hub, Email Integration, Import Sets, Transform Maps

Platform Administration: Catalog Items, Record Producers, Notifications, Email Scripts, Assignment Rules, Approval Policies, SLA Configuration, CMDB, Update Sets, Reports & Dashboards

ITOM: Discovery Fundamentals, MID Server Architecture, CMDB

PROFESSIONAL EXPERIENCE

Senior Software Engineer – ServiceNow Developer

July 2025 – Present

Tech Mahindra, Pune, India

BMC Remedy to ServiceNow ITSM Modernization & Migration

- Moved foundation data – users, groups, locations, departments, approval hierarchies – off BMC Remedy using LDAP, Import Sets, and Transform Maps.
- Rebuilt Incident, Problem, Change, Request, and Service Catalog processes natively in ServiceNow to fully retire the legacy platform.
- Built the Employee Service Portal from the ground up: branding, portal pages, catalog taxonomy, and navigation.
- Set up Assignment Rules, Approval Rules, and SLAs to support the new environment from day one.
- Migrated Update Sets across Development, Test, and Production, and carried the cutover through UAT and post-go-live stabilization.
- Reconciled CMDB relationship and approval-hierarchy gaps surfaced after cutover during the post-go-live stabilization period.

ServiceNow ITSM Implementation – Government / Public Sector

- Delivered a full ITSM implementation for a large government organization in Saudi Arabia, start to finish.
- Built Incident Management with bilingual (Arabic/English) notifications and SLA priorities tailored to government requirements.
- Developed Service Catalog items across IT, HR, and Facilities with multi-level approval routing.
- Rolled out Knowledge Management – templates, approval workflows, and role-based visibility – from scratch.
- Configured Standard, Normal, and Emergency Change processes to fit government change-control needs.
- Built executive dashboards tracking ticket trends, SLA compliance, and team KPIs, and ran requirement workshops with stakeholders in Riyadh through UAT and go-live.

ServiceNow ITSM Implementation – Online Gaming & Sports Betting

- Built Incident Management from the ground up – categories, subcategories, resolution codes, and assignment rules – for a 24/7 gaming operation.

- Stood up Major Incident Management end to end: communication plans, stakeholder notifications, bridge call triggers, and post-incident review workflows.
- Designed Change Management around CAB approvals, Emergency Changes, approval routing, and the Change Calendar.
- Migrated CMDB data – CI, location, and relationship records – using Import Sets and Transform Maps.
- Root-caused a broken request approval process after a platform upgrade to a missing out-of-the-box `sc_request` flow, then re-engineered a permanent Flow Designer workflow to prevent recurrence.
- Configured platform system properties, including session timeout, attachment limits, and integration settings, to meet organizational security requirements.

Software Engineer – ServiceNow Developer

March 2023 – July 2025

Tech Mahindra, Pune, India

Service Catalog & Business Process Automation

- Created taxonomy and branded the Employee Service Portal for a consistent, easy-to-navigate self-service experience.
- Developed a centralized Service Catalog with automated approvals via Flow Designer, streamlining request submission and fulfillment for end users.
- Built a custom Business Rule to automatically reset SLA timers whenever a request's vendor or assignment group changed, along with additional vendor-driven SLA logic tailored to the client's specific requirements.
- Designed and automated Incident, Problem, and Change Management processes using workflows, Business Rules, and notifications to reduce manual effort for manufacturing support teams.
- Implemented custom UI Actions to streamline IT workflows, reducing manual steps and improving response time during production downtime.

Core ITSM Process Enhancement

- Enhanced Incident, Problem, Change, and Request Management modules to keep pace with evolving business requirements.
- Built out Notifications, Assignment Rules, Approval Rules, and SLA configurations supporting day-to-day operations.
- Delivered Reports and Dashboards giving stakeholders visibility into ticket trends and SLA performance.
- Standardized incident categorization across teams to eliminate duplicate category codes that were fragmenting ticket reporting.
- Carried enhancements through unit testing and UAT, coordinating release timing with the operations team for smooth rollouts.

Software Test Engineer

January 2019 – March 2023

Tech Mahindra, Pune, India

- Designed and executed automated UI test suites using Selenium WebDriver and Java to validate core trading platform workflows across releases.
- Built a Page Object Model framework to keep test scripts reusable and easy to maintain as the platform evolved.
- Automated regression testing for critical flows – login, order placement, and account management – reducing manual test turnaround time.
- Integrated automated test suites into the CI/CD pipeline to enable continuous testing on every build and catch defects earlier.
- Tracked defects through to resolution, working closely with developers to validate fixes before each release.

EDUCATION

Bachelor of Science, Computer Science

Dr. D.Y. Patil ACS College, Pimpri – Savitribai Phule Pune University, Pune, India

CERTIFICATIONS

ServiceNow Micro-Certifications: Flow Designer, Integration Hub, UI Builder, Platform Analytics, Now Assist for Creator, AI Agents

ServiceNow Delivery Accreditations: Agentic AI Implementation, Now Assist Implementation
